ABSTRACT

Questionnaires were mailed to all 1,010 Illinois public school districts to collect data on general aspects of the districts and of the school library media program, program staff and materials collection, cataloging, accessibility, audiovisual resources and services, financial expenditures and affiliation with ILLINET (Illinois Library and Information Network). Analyses of the responses received from 493 school districts indicate that (1) most school districts have separate library rooms; (2) the average number of cataloged books is 15 per enrolled student; (3) school library media centers are typically open 6 to 7 hours per day; (4) over 90% of the centers have available 16mm film, filmstrip, slide, overhead and opaque projectors, phonographs, and a cassette recorder and/or playback machine; (5) only 11% of the districts report the availability of a microcomputer; (6) expenditures for all purposes other than salaries averaged \$14 per pupil; and (7) just under one-half of the respondents are affiliated with ILLINET. Appendices include a survey questionnaire form and data for each responding school district, and 30 pages of basic tables which present the distribution of responses by enrollment size group, geographic area, grade levels served, number of attendance centers, and a statewide estimate. This study could not have been done without the help of many persons. The data were coded, processed, and analyzed by Daisy Auyeung, Lisa Bachrach, Diane Forster, Carrie Klabunde and Abdus Sattar; Brad Hess wrote the input program, Susan Bonzi the graphics programs, and Lisa Bachrach the SPSS programs. Kathy Painter typed the report. In addition, thanks are owed the many school librarians who completed the data collection form used in this survey.

Section 1. Introduction and Methodology.

Almost certainly there are more school library media centers in Illinois than all other types of libraries combined. And yet we have far less information about them than we have of public libraries or of academic libraries. Until the survey described in this report, no data on school libraries had been collected in a systematic manner and published by either the Illinois State Library or the State Board of Education. In 1979 the Illinois State Library commissioned the Library Research Center of the University of Illinois to extend its statistical services for ISL to the collection of data on an annual basis concerning school (and also academic and special) libraries. The Research Center in turn solicited the assistance of the Illinois Association for Media in Education, and has worked with an IAME committee chaired by Tom Brown, New Trier High School East, Winnetka. The survey questionnaire was reviewed by the committee members, revised in the light of their comments, pretested with half-a-dozen school districts, and revised again. A copy of the final form of the questionnaire appears here as Appendix 2.

It was decided to conduct this first survey, in 1981, of all public school districts - whether or not they were at the time affiliated with a state-funded regional library system. Copies of the survey form were distributed in August 1981 through each of the 18 library systems to all public school districts in its system area; they were returned directly to the Illinois State Library which forwarded them to the Library Research Center. At the Research Center, each respondent's form was reviewed (and numerous phone calls made to clarify or complete the responses), coded by one person and checked by another, keyed into a computer file independently by two

different people, and a comparison program run to identify discrepancies which were resolved by a third person. (This computer file is available for further analysis and special studies.) Analysis of the data was then done by SPSS (Statistical Package for the Social Sciences).

In all there were 493 usable responses or 49% of all 1010 public school districts in the state. Though self-selected, this sample of respondents differs from all school districts by no more than chance alone can explain, on at least two counts, viz., the distribution by three enrollment size groups (see Part A of Table 1) and by three geographic regions of the state (see Part B of Table 1). We thus can have some confidence that the respondents are representative of all public school districts.

Table 1

Distribution of All Public School Districts and of the Respondents
(A) by Enrollment Size, and (B) by Geographic Region.

Part A. Enrollment Size			Part B. Geographic Region		
Group	All 1010 Districts	All 493 Respondents	Region*	All 1010 Districts	All 493 Respondents
Up to 499	35.0%	34.9%	Chicago Suburbs	31.3%	29.2%
500-1299	32.9%	36.9%	North and

			Southern IL	32.0%	33.1%
Total	100.0%	100.0%		100.0%	100.0%

$$(X^2 = 3.15, 2df, p = .20)$$

$$(X^2 = 0.83, 2df, p = .68)$$

*See the note to Table A1 in Appendix 1 for the assignment of library systems to the three geographic regions.

In Appendix 1 are the basic reference tables on which the text of this report is based; these are referred to as Table A1, A2, etc., to distinguish them from summary tables in the text. The tables in Appendix 1 cover all the questions in the survey form, in both numbers of school districts and percentages of totals or subtotals or in means and medians. In each appendix

table, the data on each question are presented four times - once by enrollment size group of the school districts, once by the grade levels served, once by the geographic region, and once by the number of attendance centers. In addition, there is a statewide estimate of the number of all public school districts which observe a given practice; this estimate was made by weighting the average or percentage of each enrollment size group by that group's percentage in all 1010 public school districts (as shown in Part A of Table 1 above).

In many of the tables in Appendix 1, we give both the mean or arithmetic average (the sum of all the values divided by the number of cases) and also the median (that value on either side of which is an equal number of cases). When the mean and the median are the same or close to being the same, the distribution of all cases is normal or bell-shaped; if the mean is measurably larger than the median, there are some cases with very high values; if the mean is measurably smaller than the median, there are some cases with very low values. The text report interpreting the tables in Appendix 1 concerns itself only with the means. Finally, in Appendix 3 we give the responses for each school district on each of 17 selected variables.

Section 2. General Aspects of the School Districts and of the School Library Media Program.

Of the 493 public school districts whose responses constitute the basis of this study, the average number of pupils enrolled at the beginning of the 1981/82 school year was 1477 (see Part E, row 1, of Table A1). The smallest size group differed from the largest by much more (1 to 11.9) than did elementary school districts from high school districts (1 to 1.6) or southern Illinois school districts from Chicago suburbs (1 to 2.1). Elementary school districts were more than half the total of those with fewer than 500 students and of

those in the Chicago suburbs; high school districts were almost two-thirds those in southern Illinois; and combined elementary and high school districts were about 60% or more of those with 500 to 1300 pupils, of those in northern and central Illinois, and of those with more than one attendance center.

The statewide average number of separate attendance centers in these 493 school districts was 3.5; the range was from 1.4 in the case of those with fewer than 500 pupils to 6.6 in those with over 1300 pupils, but only from 1.5 in high school districts to 4.2 in combined elementary and high school systems and from 2.9 in southern Illinois to 3.9 in the Chicago suburbs. In most cases, these various attendance centers had library service provided in a separate room not usually used for any other purpose. In less than one-fifth of the cases was service given in a room used also for some other purpose (for example as a study hall); and in less than 10% was service given only by classroom libraries or by other arrangements (e.g., hallways, book carts, public library bookmobile, or use of a library in an adjoining building). Very few districts reported no library service in any of their attendance centers, though we cannot be sure that this percentage would be as low if we had returns from all 1010 public school districts. Separate library rooms were most often found in the Chicago suburbs and least often in school districts with fewer than 500 pupils and with only one attendance center. A room used also for another purpose was most frequent in the latter groups and least often in the former. Classroom libraries and other arrangements were most frequent in the smallest schools (fewer than 500 pupils), in combined elementary and high school districts, and in southern Illinois. See Fig. 1 for a graphic representation of some of these relationships.

Presence of a library media center supervisor was reported consistently (from 59% to 69%) in all enrollment size groups, in the three divisions by

grades served, and in the three geographic regions. However, the 120 responses from school districts with only one attendance center--38% of the positive responses to this question (see Part D, row 5, of Table A1)--presumably represent the principal, curriculum director, superintendent or other person to whom the media center specialist reports and not a coordinator and technical supervisor of library media operations.

Section 3. Aspects of Staff and Collections of Materials in School Library Media Programs.

From the computer file of data, we calculated that there were 56 school districts (11% of the 493 respondents) which had no professional media specialists--even part-time--available at either the district or the building level. This percentage would probably not be so low if we had returns from

all school districts. Of our 493 respondents, 61% had no professional media specialists at the district level, from a high of 97% in the districts with one attendance center each to a low of 36% in those with five or more (see row 1 of Table A2). The average number of professional media specialists in all those districts with such persons at the district level was 1.4 by head count, and most often they were in the high school districts. In about three-fourths of these cases, there was an average of 1.4 full-time professionals, and correspondingly the overall average full-time equivalent of professional media specialists at the district level was 1.2--ranging from 2.5 in high school districts to 0.8 in districts with fewer than 500 pupils each.

Professional media specialists were more often found and in larger numbers at the building than at the district level. Only about half as many districts reported no such persons at the building level as at the district level; most often these were in the districts with fewer than 500 pupils and in those with 2-4 attendance centers, and least often in the high school districts (see Figs. 2 and 3). The average number of such specialists at the building level was 2.4, ranging from 1.1 in the smallest districts to 5.4 in those with 5 or more attendance centers. Full-time specialists were reported in over 85% of all districts with any media specialists at the building level, for an average of 2.3 per district by head count and also in full-time equivalent. The latter ranged from 0.9 in the smallest schools to 4.7 in the largest, was essentially uniform by grade levels served, and varied from 1.7 per district in southern Illinois to 3.4 in the Chicago suburbs (see Fig. 3).

FIG. 2: DISTRICTS WITH NO MEDIA SPECIALISTS
AT BUILDING LEVEL BY ENROLLMENT SIZE

FIG. 3: DISTRICTS WITH NO MEDIA SPECIALISTS
AT BUILDING LEVEL BY GEOGRAPHIC REGION

Next to professional staff, the most important resource of school library media centers consists of their materials. We asked for the number of volumes of books, but for the number of titles of periodicals and audio-visuals (see question 6 on p. 2 of Appendix 2). Almost all (97%) of the school districts reported the number--or the estimated number--of their cataloged books. The overall average was 22,000 volumes; the largest difference was between the 6434 average in districts with fewer than 500 pupils and almost 47,000 in those with over 1,300 pupils, a ratio of one to 7 compared with a ratio of one to 1.2 for the 3 levels of grades served, one to 2.4 between southern Illinois and Chicago suburbs, and one to 5.8 between districts with one and with over 4 attendance centers (see Fig. 4). Most of these relationships are reversed when we calculate the average number of books held per pupil (line 9 of Table A2 divided by line 1 of Table A1), with the results shown in Table 2.

Table 2

Number of Cataloged Books Per Pupil

<u>Enrollment Size</u>		<u>Grades Served</u>		<u>Geographic Regions</u>		<u>No. of Centers</u>	
Up to 500	22.3	K-8	18.6	Suburbs	15.6	1	18.8
500-1299	17.3	9-12	14.1	No & Cen	16.0	2-4	15.2
1300 and up	13.6	K-12	13.7	Southern	13.6	5+	14.3
		Statewide average		14.8			

It must be remembered that these data are of total holdings; we have no information on the number of duplicate copies, on the age of these books, their distribution by subject area, their suitability, or any other aspect of their quality. This applies also to the data on nonprint and magazines. Despite the recognized place of audiovisuals in the modern curriculum, 12% of these school districts either had no nonprint materials or had no count of the number of titles held. The other districts had an average of over 4000 titles, (2.7 per student), ranging from a low of 843 in districts with fewer than 500 pupils to 9405 in the largest districts (a ratio of 1 to 19). The averages by grade levels served were not far apart, but schools in southern Illinois compared with those in the Chicago suburbs as 1 to 3 (see Fig. 5).

The statewide average number of magazines and newspaper titles currently received was 87 per district; though we asked that duplicate copies be eliminated, we suspect that most respondents simply added together the number of subscriptions for each separate media center. In any case, our data show a low of 38 subscriptions in the smallest schools and a high of 152 in the largest (a ratio of 1 to 4), a low of 46 in elementary schools and a high of 148 in high schools (1 to 3), a low of 73 in north and central Illinois and a high of 108 in the Chicago suburbs (1 to 1.5).

Section 4. Aspects of Cataloging in School Library Media Programs.

In regard to the cataloging and processing of materials in these school library media centers, we sought to ascertain the relative emphasis on the use of staff at the district level, the use of staff at the building level, the use of outside agencies (such as preprocessing by book wholesalers), and the use of other arrangements (see Table A3). Clearly, the method most often reported was the use of staff at the building level (see Fig. 6). From row 2 of Part E of Table A3, it is estimated that 80% of all districts in the state do at least some--for an average of 62%--of their cataloging and processing, and 273 (27% of all 1010 public school districts in Illinois) do all of it in this way. A higher percentage (93%) of high school districts use this method than does any other group; the highest percentage (73%) of

FIG. 6: METHODS OF CATALOGING AND PROCESSING
BY ENROLLMENT SIZE

such work was done by the smallest schools, and they also accounted for the largest percentage (43%) of those which did all their cataloging and processing in this manner ($74 \div 172 = 43\%$; from row 2 of Group 1, Part A, Table A3).

More than half (58%) of all the respondents used outside agencies, and they did more than half of all their cataloging and processing by this method; but practically no one did all of it that way. These percentages are relatively uniform across the enrollment size groups, the grade levels served, the geographic regions, and the number of attendance centers. Thirty percent of all school districts used staff at the district level--most often in the largest and the K-12 districts and in the Chicago suburbs. They did almost 60% of all their cataloging and processing in this fashion, with a high of 76% in the high school districts. Only 7% did all their technical services

in this fashion, with a high of 12% for the districts in the Chicago suburbs to a low of 3% in the smallest districts. Other arrangements (e.g., volunteers and use of a regional library system) were reported by only 3%, and accounted for less than 40% of all their cataloging and processing.

Only 2% of these districts entered catalog records into a computerized data base available to other libraries, viz., regional library system union catalogs of books or periodicals, OCLC, and county film co-op lists. Nine percent contributed records to manual files outside the school district; most often these were medium-sized high school districts in north and central Illinois, with only one attendance center each. The files to which they added their records were regional library system lists of books, periodicals or audiovisuals, and county co-op lists of nonprint materials.

Section 5. Aspects of Accessibility of School Library Media Centers.

Rows 1-3 of Table A4 show a rather uniform pattern of the number of hours these school library media centers were open in a typical week, from an average minimum of 32 to an average maximum of 35. School districts with fewer than 500 students were open the fewest average hours per week--30, and the high school districts the highest average--39. Only about one-fifth of these school districts had any media centers open in the summer--primarily the largest and the high school districts and those in the Chicago suburbs.

Almost 40% of all 493 school districts reported that their library media centers were open to the general public, and 84% of these had some actual use in 1980/81. School media centers open to the public were equally distributed by school district enrollment size, were most common in high school and least often in elementary school districts, and were more common

in downstate Illinois than in Chicago suburbs. Actual use was most frequent in the largest, in the high school districts, in those in Southern Illinois, and in those with five or more attendance centers.

A few more districts allowed their media centers to answer reference questions from the general public than permitted other use, but a somewhat smaller percentage actually handled such questions than had other use by the public. Availability for reference service was most frequent in medium-sized districts (500-1299 pupils), in high school districts, and in southern Illinois; actual reference use by the general public was most frequent in the largest districts, in the high school districts and in southern Illinois.

Section 6. Audiovisual Resources and Services.

Besides the data reported earlier on the total number of nonprint titles held (see Sec. 3 above), we asked a series of questions on audiovisual services and equipment (see Table A5). One-fourth of all these school districts had a centralized audiovisual production center--most often in the largest districts and least in the smallest, most often in the high school and least in the K-12 school districts, most often in the Chicago suburbs and least in north and central Illinois, and most often in the districts with five or more attendance centers and least in those with two to four centers.

Of seven specified types of audiovisual production services, one was reported as available for either students, faculty, or both by more than two-thirds of the respondents, viz., the making of transparencies. Four services were available in about half the school districts, viz., original videotaping, videotaping off-the-air, audiotape duplication, and making posters. The last two services (slide-tape production and graphics) were found in about a third of the school districts. In all seven cases the pattern of distribution is

the same; the largest school districts offer these services the most often, and the smallest the least; the high school districts the most, and the elementary school districts the least; the districts in the Chicago suburbs the most, and those in north and central Illinois usually the least; and the districts with five or more attendance centers the most and those with only one the least.

Respondents were asked to indicate the availability to media centers, whether at the district or building level, of each of 16 specified types of audiovisual equipment; responses of "other" kinds of equipment raise this number to 24 distinguishable types. The statewide average was 14 types per school district (58% of the maximum) with minimal variation between the various groups of districts; the biggest difference was an average of 12 types of equipment in the smallest size districts and with only one attendance center and 16 in the largest and with five or more centers.

Table A5 displays the data on these 24 types of equipment in five groups, and we shall use those groups here to summarize the findings of this part of the survey. The first group, "Viewers and Projectors," consists of 8 specified types and a miscellaneous category. Five of these 8 types of equipment were held by over 90% of all school districts, viz., 16mm film, filmstrip, slide, overhead and opaque projectors. Of the other types in this group, sound filmstrip projectors were reported in 74% of all districts, 8mm film and filmloop projectors in 60%, microform readers or reader-printers in 39%, and the miscellaneous types (e.g., slide-filmstrip viewers and stereopticons) in 11%; in all cases, they were reported most often in the largest districts, in the high school districts, and in the Chicago suburbs.

In the second group, "Audio Equipment," are found the only other two types available in over 90% of all school districts, viz., phonograph player

and cassette recorder and/or playback. Reel-to-reel tape recorders were found in 85% of all districts, and miscellaneous audio equipment in only 6%. Of four types of "Television Equipment" (group three), a television set was found most often--in 87% of all districts, a videocassette or videotape player in 67% (but much less often in small districts, in elementary school districts and in districts with only one attendance center), and a videotape recorder and electronic games in no more than 3% of all reporting districts.

There are four types of equipment in the fourth group, "Production Equipment." Of these the most common was a photocopier--in 81% of the respondents; next is a videocamera in 66% (but much less often in districts with fewer than 500 pupils and in those with elementary grades only); and other types of cameras in 63%. Miscellaneous production equipment (e.g., laminating press and sign printer) were available to only 16% of these respondents. All three types of equipment in the fifth group, "Teaching Machines," were in no more than 11% of all districts. Mini/micro computers and/or computer terminals were in 11% (and uncharacteristically a little more often in elementary school districts than in high school or K-12 districts). Reading machines and other teaching machines were reported by only 6% of all districts (and in both cases more often by elementary than by high school districts, and more often by districts with five or more attendance centers than in those with only one).

Section 7. Financial Expenditures.

A few of these school districts spent nothing in 1980/81 for their school library media centers (see row 12 of Part E, Table A6). The others spent an average of over \$20,000, but this amount varied from an average of \$4631 in the smallest districts to \$45,824 in the largest (1 to 10), from \$14,167 in

all elementary school districts to \$33,994 in the high school districts (1 to 2.4), from \$12,507 in southern Illinois to \$32,997 in the Chicago suburbs (1 to 2.6), and from \$9227 in districts with only one attendance center to \$43,147 in those with five or more (1 to 4.7). Of the 11 categories of expenditure, three were reported by fewer than half of the respondents, viz., library equipment, binding and rebinding, and "all other purposes"; this last category was used to report maintenance and repair of audiovisual equipment, Title IV purchases, furniture, computer hardware and software, and even capital improvements.

Three categories of expenditure averaged over \$3000 each for all districts reporting financial outlays, for a combined total of about two-thirds of the total. Of these, books was by far the largest--a statewide average of over \$7000 compared with over \$3000 each for audiovisual materials (not including the rental of films) and for audiovisual equipment. Of all 12 groups of districts, the combined expenditures for AV materials and film rental never exceeded the average for books. There are four categories of expenditures in which the statewide average varied from \$1900 to \$2500, viz., magazines and newspapers, rental of films, library equipment, and miscellaneous. Finally, in four categories (binding and rebinding, audiovisual supplies, library supplies, and continuing education of library personnel), the statewide average was from \$239 to \$1492.

Table A7 shows the expenditures for each of these 11 categories averaged over all respondents (including those which spent nothing in one or all categories), with the percentage for the category of the total expenditures for each group of school districts. By this method of counting, all print-related expenditures (books, magazines, binding, library equipment, and supplies) were 59% of the statewide average total; audiovisual expenditures

(materials, rental of films, supplies, and equipment) were 35%. The final row of Table A7 shows the per pupil library media center expenditures of these 493 school districts in 1980/81. The statewide average was \$14 per pupil, with a high of \$19.71 in the high school districts and a low of \$12.06 in the districts with five or more attendance centers; the smallest districts had the highest average, and the largest the lowest.

Section 8. Affiliation with ILLINET, Evaluation of
System Services, and Choice of Topics for Future Studies.

The total line of row 1 of Part E, Table A8, shows that 239 school districts (48% of the 493 respondents in this survey) were affiliated in whole or in part with ILLINET through the regional library systems; the smallest districts were less often affiliated than the largest, the elementary less often than the high school districts, the Chicago suburbs far less often than southern Illinois, and one attendance center districts less often than those with five or more. Those districts which were so affiliated and which have used system services gave generally high marks in their evaluation of them. Of the seven services listed in rows 2a-g of Table A8, three were evaluated by fewer than 20% of all affiliated school districts, which would indicate that these services were not often available to or used by school affiliate members; these services are cooperative collection development, access to computerized services, and all other miscellaneous services. The evaluations of the other four system services are summarized in Table 3.

Table 3. Evaluation of Major System Services by
Affiliated School Districts

<u>Number of All Respondents/Percent Satisfied or Very Satisfied</u>							
<u>Service</u>	<u>by Enrollment Size</u>			<u>by Grade Levels</u>			
	<u>Gp. 1</u>	<u>Gp. 2</u>	<u>Gp. 3</u>	<u>K-8</u>	<u>9-12</u>	<u>K-12</u>	
1. Interlibrary Loan	57/86%	93/94%	68/90%	47/83%	39/89%	132/93%	
2. Reference Service	35/91%	66/92%	54/91%	26/88%	26/92%	103/92%	
3. Advice of System Consultants	23/87%	44/91%	28/89%	15/93%	12/67%	68/93%	
4. Continuing Education Opportunities	39/70%	58/91%	38/79%	28/71%	21/72%	86/87%	
<u>Service</u>	<u>by Region</u>			<u>by No. of Centers</u>			<u>State Estimate</u>
	<u>CS</u>	<u>NCI</u>	<u>SI</u>	<u>1</u>	<u>2-4</u>	<u>5+</u>	
1. Interlibrary Loan	35/80%	69/91%	114/93%	67/88%	98/94%	53/87%	218/90%
2. Reference Service	30/80%	47/91%	78/96%	39/90%	77/85%	39/87%	55/91%
3. Advice of System Consultants	17/71%	34/94%	44/93%	25/88%	48/90%	22/91%	95/89%
4. Continuing Education Opportunities	18/78%	50/76%	67/86%	39/74%	65/88%	31/77%	135/81%

Interlibrary loan is clearly the service most often used, and is among those most highly rated; reference service was evaluated by fewer districts but rated equally high. Continuing education opportunities was rated by even fewer school districts and gets the lowest overall average rating of these four; advice of system consultants was rated by only 40% of all school affiliate respondents but in quality was very close to interlibrary loans and reference service. Table 3 shows that in three of the four services, the lowest ratings came from the smallest school districts, the elementary school districts, and those in the Chicago suburbs.

The final section of Table A8 records the number of votes cast for possible topics for future surveys. Three topics received over 200 votes each, viz., censorship, instruction in library skills, and book losses.

Just over 100 votes each were cast for an interlibrary loan survey, cooperative collection development, and measures of performance. In last place were personnel and all other topics.

Section 9. Summary.

A survey like this produces a multitude of facts, and the calculation of averages, percentages, subtotals, and other measures adds still more data. Each different reader will have his/her own idea as to which of these are most important, but the authors of this report present here their selection of the several findings in this study which seem to them most noteworthy.

In the vast majority of cases, these school districts had separate library rooms; dual purpose rooms were a poor second, and classroom libraries a distant third. This is along step forward in regard to physical quarters. In regard to professional staff, two things stand out--61% of these districts had no professional media specialists at the district level, but 77% had such specialists at the building level and an average of 2.3 in full-time equivalent per district.

The average number of cataloged books was 15 per enrolled student, and even in small districts (those with fewer than 500 students) the average number of books was 6400. On the other hand the average number of all nonprint titles reported was less than 3 per student. Cataloging and processing of library materials was most often done at the building level, and a close second was the use of services from outside and usually commercial agencies.

Typically the school library media centers in these districts were open 32 to 35 hours a week, or 6 to 7 hours a day. Almost half were open to the public, and most so available were so used. Of many different types of audio-visual equipment, 7 were available to the media centers in over 90% of these

school districts, viz., 16mm film, filmstrip, slide, overhead, and opaque projectors, a phonograph player, and a cassette recorder and/or playback machine. Only 11% of the districts reported availability of a microcomputer, but this is sure to change in even the next few years.

Expenditures for all purposes other than salaries averaged \$14 per pupil. Books and other print and related costs accounted for 59% of these expenditures on the average, compared with 35% for audiovisual software, hardware, and related costs.

Just under half of the respondents were affiliated with ILLINET--75% of those in southern Illinois vs. 28% in the Chicago suburbs. Of those so affiliated and which had used system services, 80%-90% were satisfied or very satisfied with each of four main services--interlibrary loan, reference, advice of system consultants, and continuing education opportunities. It would appear that a base has been laid for further cooperation with other libraries.

	90/62%	123/67%	101/61%	120/69%	127/59%	67/65%	640/63%

Table A1, continued.

Group 1 consists of those school districts with fewer than 500 students at the beginning of the fall 1981 term.

Group 2 consists of those school districts with 500-1299 students.

Group 3 consists of those with 1300 or more students.

K-3 includes grades 1-8 and K-9; 9-12 includes grades 7-12 and 8-12; and K-12 includes grades 1-12.

Chicago Suburbs consist of Bur Oak, DuPage, North Suburban, and Suburban Library Systems; North and Central Illinois of Corn Belt, Illinois Valley, Lincoln Trail, Northern Illinois, River Bend, Starved Rock, and Western Illinois Library Systems; and Southern Illinois of Cumberland Trail, Great River, Kaskaskia, Lewis & Clark, Rolling Prairie, and Shawnee Library Systems.

How to read this table: The figures in parentheses at the head of each column are the number of libraries in that category. The figures in the extreme right-hand column, "State Estimate," were found by weighting the mean or the percentage shown in each of the three enrollment-size groups by the proportion which that group was of all Illinois public school districts in 1981 (see Table 1 on p. 3). Thus in the first line of row 2 above, 90 school districts in Group 1 served grades K-8; this was 52% of all 172 school districts which responded to this survey and had fewer than 500 students in fall 1981. Of the school districts with 500-1299 students, 47 or 26% served grades K-8; and of those with 1300 or more students, 35%. When these percentages were weighted by the proportions of all 1010 public school districts known to have these various levels of enrollment, the estimated state estimate of all schools serving K-8 is 38% which is 384 of 1010. For ease of interpretation, whole percentages only are shown in this column, but percentages to one decimal were always used to find the values preceding the slash.

- (a) The statewide total of 4304 attendance centers comes from Illinois State Board of Education, Fall Pupil Enrollment and Teacher Statistics: Illinois Public Schools, 1980-1981 School Year (1981) p. 122.

* 0.5% or less.

(a) 88 respondents (18% of the total) reported combined expenditures for 2 to 11 categories. These were handled in this fashion. We took the average amounts reported by the other respondents for each separate category, in each of the enrollment size groups, found their percentage distribution when combined, and applied these percentages to the figures given us for two or more categories together.

(b) This is not the sum of lines 1-11, but the sum of all reported expenditures divided by the number of respondents with expenditures.

See notes at end of Table A1.

(a) In this table, "State Estimate" consists of the sum of the three group columns in any part.

See notes at end of Table A1.

Appendix 2. The Survey Questionnaire Form.

ID # _____

Illinois State Library, Springfield, IL 62756

1981 Survey of Illinois School Library Media Centers

(Please complete this questionnaire by October 1, 1981)

(Circle the number at the right hand edge for your answer to the question. Answers should be for the 1980/81 school year. If an exact figure is not available, supply your best estimate. Please answer for the whole of your school district. When your figures are based on a definition different from that given here, supply your definition. Do not leave any item blank; enter "0" if that is the answer, or "NA" if the question is "not applicable" to your situation. "Media Center" and "Library" are used here as synonyms.)

1. (a) Educational Service Region, county, name and number of school district:

- (b) Full mailing address: _____

2. (a) Is there a district media center supervisor? Yes... 1
 No... 2

- (b) If "Yes," what is his/her name? _____

3. (a) Number of pupils in the school district (as of the first day of attendance): _____

- (b) Grades served by the school district: _____

4. (a) How many separate attendance centers are there in the district? _____

- (b) Regardless of staffing, in how many of these attendance centers
- (1) is the library media center in a separate room which is not usually used for any other purpose? _____
 - (2) is the library media center in a room which is normally used also for some other purpose (e.g., study hall)? _____
 - (3) is service provided only by classroom libraries? _____
 - (4) is service provided by some other arrangement? (specify) _____
 - (5) is no library media service available? _____

-2-

5. In column (1) below, indicate the number of professional media specialists who worked in the district in 1980/81 (a professional media specialist is a certificated person, employed in a position of professional grade whose duties require a minimum of 18 semester hours of specialized training in media and library science);

in column (2) give the number of such persons who worked full-time;

in column (3) give the total full-time equivalent of all such persons who worked in the media centers last year. For column (3) use the number of hours required for full-time employment in your school district. Thus if there were 4 media specialists at the district level in 1980/81, 1 full-time and 3 for 15 hours a week each, and if your school district requires 38 hours of work a week for full-time employment, then the figure for row (a) in column (1) would be 4, in column (2) 1, and in column (3) 2.17 (because 15 hpw is 0.39 of 38 hpw and $0.39 \times 3 = 1.17 + 1 \text{ full-time} = 2.17$).

	(1) No. of Persons	(2) No. Working Full-Time	(3) Total Full-Time Equivalent
(a) At the district level	_____	_____	_____
(b) At the building level	_____	_____	_____
(A school district with only one attendance center should use row b above.)			
6. In rows (a)-(c) below, give figures only for materials owned by and under the direct control of the library media program.			
			Total at End of Last Year
(a) Books, cataloged (no. of volumes)			_____
(b) All non-print materials (no. of titles)			_____
(c) All magazines and newspapers (no. of titles for which there are current subscriptions; if you have 6 subscriptions for a given magazine, count it as one title)			_____
7. How was cataloging and processing of library materials for this district done in 1980/81? Check all that apply and estimate the division of work.			
			% of Total
(a) By staff at the district level	_____		_____
(b) By staff at the building level	_____		_____
(c) By the use of outside agencies (e.g., Brodart)	_____		_____
(d) By other arrangement (specify)	_____		_____
Total			100%

-3-

8. (a) Do you input catalog records into a machine-readable data base available to other libraries? Yes... 1
No... 2
If "Yes," which? _____
- (b) Do you input catalog records into any (non-computerized) union catalog outside your school district? Yes... 1
No... 2
If "Yes," which? _____
9. Regardless of staffing, how many hours were the library media centers in your district open for use, in a typical school week last year?
- (a) the minimum number of hours _____
- (b) the average for all centers _____
- (c) the maximum number of hours _____
10. Are any library media centers in this district normally open for use during the months of summer school? Yes... 1
No... 2
No summer school... 3
11. Does the district have a centralized audiovisual production center? Yes... 1
No... 2
12. Circle 1 at the right-hand edge for each type of production center facility or service which the district provided in 1980/81 for either students, faculty or both.
- (a) making transparencies 1
- (b) audiotape duplication 1
- (c) making posters 1
- (d) graphics 1
- (e) slide-tape production 1
- (f) original videotaping 1
- (g) videotaping off the air 1
13. (a) Are any of the library media centers in this district open to the general public? Yes... 1
No... 2
- (b) If "Yes," did any of the general public actually use them last year? Yes... 1
No... 2
14. (a) Is it district policy for the library media centers to answer reference questions for the general public? Yes... 1
No... 2
- (b) If "Yes," were any such questions actually received in 1980/81? Yes... 1
No... 2

-4-

15. (a) Are any of the school library media centers in this district affiliated with ILLINET through the regional Library System?
 Yes... 1
 No... 2
- (b) If "Yes," enter an X in column (2) for each ILLINET and regional Library System service which was used last year; and in column (3) circle the number which indicates your general satisfaction or dissatisfaction with that service.

(1) ILLINET/Regional Library System Service	(2) Used in 1980/81	(3) Degree of Satisfaction				
		Low High				
(1) Interlibrary loan	_____	1	2	3	4	5
(2) Reference service	_____	1	2	3	4	5
(3) Cooperative collection development	_____	1	2	3	4	5
(4) Access to computerized services	_____	1	2	3	4	5
(5) Advice of system consultants	_____	1	2	3	4	5
(6) Continuing education opportunities (e.g., workshops)	_____	1	2	3	4	5
(7) Other (specify) _____	_____	1	2	3	4	5

16. Circle 1 at the right-hand edge for each type of equipment specified if the library media centers in your district have access to any such, either from the district office or at the building level.

(a) 8mm film projector	1
(b) 16mm film projector	1
(c) Filmstrip projector	1
(d) Sound filmstrip projector	1
(e) Phonograph	1
(f) Cassette player	1
(g) Slide projector	1
(h) Videocassette player	1
(i) Television set	1
(j) Videocamera	1
(k) Other types of cameras	1
(l) Photocopier	1
(m) Microform reader or reader-printer	1
(n) Overhead projector	1
(o) Reel-to-reel tape recorder	1
(p) Opaque projector	1
(q) Other AV equipment (specify) _____	1

-5-

17. Show expenditures made by the district for library media centers in the 1980/81 school year for each purpose listed, and from all sources of funds (district budget, Federal grants, donations, fines, etc.). Round to whole dollars.

<u>Purpose of Expenditure</u>	<u>Total From All Sources</u>
(a) Books	_____
(b) Magazines & newspapers	_____
(c) Binding and rebinding	_____
(d) AV materials for resource collection	_____
(e) Rental of films (if coordinated by the media center)	_____
(f) AV equipment purchased	_____
(g) Library equipment purchased	_____
(h) Audiovisual supplies	_____
(i) Library supplies	_____
(j) Expenses for library personnel to attend professional conferences, continuing education, etc.	_____
(k) All other purposes (not including salaries)	_____

18. Circle the 1 to the right of each topic listed on which you would like to see future one-time studies.

Book losses	1
Censorship or related pressures	1
Cooperative collection development	1
Instruction in library skills	1
Interlibrary loan practices and policies	1
Measures of performance	1
Personnel data	1
Other (specify)	1
_____	1
_____	1

19. (a) Name of person completing this form: _____
- (b) Your telephone number and extension: _____

Thank you. Please return this questionnaire to the Illinois State Library in the enclosed self-addressed stamped envelope.

Appendix 3. Data for Each Responding School District

The following is an explanation of the column headings and coded responses of Appendix 3:

DIST = school district number.

TOWN = name of town in which the school district office is located.

ENROLL = the number of students enrolled in the school district as of fall 1981.

0 = up to 999	5 = 5,000 to 5,999
1 = 1,000 to 1,999	6 = 6,000 to 6,999
2 = 2,000 to 2,999	7 = 7,000 to 7,999
3 = 3,000 to 3,999	8 = 8,000 to 8,999
4 = 4,000 to 4,999	9 = 9,000 to 33,000

GRADES = the grades served in the district.

1 = K to 8	5 = 1 to 12
2 = K to 9	6 = 7 to 12
3 = K to 12	7 = 8 to 12
4 = 1 to 8	8 = 9 to 12

CENTERS = A/B/C/D

A = the number of library media centers in a separate room which was not usually used for any other purpose.

0 = 0 or blank	5 = 20 to 24
1 = 1 to 4	6 = 25 to 29
2 = 5 to 9	7 = 30 to 34
3 = 10 to 14	8 = 35 to 39
4 = 15 to 19	9 = 40 to 70

B = the number of library media centers in a room which was normally used also for some other purpose.

0 = 0 or blank	5 = 5
1 = 1	6 = 6
2 = 2	7 = 7
3 = 3	8 = 8 to 20
4 = 4	

C = the number of attendance centers in which service was provided only by classroom libraries, or service was provided by some other arrangement.

D = the number of attendance centers in which no library media service was available.

FTEDIST = total full-time-equivalent professional media specialists at the district level.

0 = 0.0	5 = 4.0 to 4.9
1 = 0.1 to 0.9	6 = 5.0 to 5.9
2 = 1.0 to 1.9	7 = 6.0 to 6.9
3 = 2.0 to 2.9	8 = 7.0 to 7.9
4 = 3.0 to 3.9	9 = 8.0 to 9.0

FTEBLDG = total full-time-equivalent professional media specialists at the building level.

0 = 0.0	5 = 8.0 to 9.5
1 = 0.1 to 1.9	6 = 10.0 to 11.9
2 = 2.0 to 3.9	7 = 12.0 to 13.9
3 = 4.0 to 5.9	8 = 14.0 to 15.9
4 = 6.0 to 7.9	9 = 16.0 to 28.0

BOOKS = the number of cataloged books (volumes) owned by and under direct control of the library media program.

0 = 0 or blank	5 = 45,000 to 59,999
1 = 150 to 4,999	6 = 60,000 to 74,999
2 = 5,000 to 14,999	7 = 75,000 to 149,999
3 = 15,000 to 29,999	8 = 150,000 to 299,999
4 = 30,000 to 44,999	9 = 300,000 to 400,000

NPRINT = the number of titles of all non-print materials owned by and under direct control of the library media program.

0 = 0 or blank	5 = 15,000 to 24,999
1 = 10 to 2,499	6 = 25,000 to 34,999
2 = 2,500 to 4,999	7 = 35,000 to 44,999
3 = 5,000 to 9,999	8 = 45,000 to 59,999
4 = 10,000 to 14,999	9 = 60,000 to 100,000

MAGNEWS = the number of titles of all magazines and newspapers for which there were current subscriptions.

0 = 0 or blank	5 = 200 to 249
1 = 1 to 49	6 = 250 to 299
2 = 50 to 99	7 = 300 to 349
3 = 100 to 149	8 = 350 to 449
4 = 150 to 199	9 = 450 to 550

CATPROC = A/B/C/D

A = the percentage of cataloging and processing done by staff at the district level.

B = the percentage of cataloging and processing done by staff at the building level.

C = the percentage of cataloging and processing done by the use of outside agencies.

D = the percentage of cataloging and processing done by other arrangement.

1 = 1 to 9%	6 = 50 to 59%
2 = 10 to 19%	7 = 60 to 69%
3 = 20 to 29%	8 = 70 to 79%
4 = 30 to 39%	9 = 80 to 100%
5 = 40 to 49%	

HOURS = the average number of hours the library media centers of this district were open for use per week in 1980/81

0 = 0 or blank	5 = 20 to 24
1 = 1 to 4	6 = 25 to 29
2 = 5 to 9	7 = 30 to 34
3 = 10 to 14	8 = 35 to 39
4 = 15 to 19	9 = 40 to 50

SUMMER = were any of the library media centers in this district open during the months of summer school?

Y = yes

N = no, or there was no summer school

AVCENT = did the district have a centralized audiovisual production center

Y = yes

N = no or blank

AVSERVS = the total number of the following seven services which the district provided for students and/or faculty: making transparencies, audiotape duplication, making posters, graphics, slide-tape production, original videotaping, and videotaping off the air.

PUBLIC = were any of the library media centers in the district open to the general public; and if yes, did any of the general public use them?

0 = blank

1 = no, they were not open to the public

2 = yes, they were open but no one used them

3 = yes, they were open and some people used them

REFER = was it district policy for the library media centers to answer reference questions for the general public; and if so, did anyone ask any questions?

0 = blank

1 = no, it was not the policy to answer reference questions for the general public

2 = yes, it was policy to do so but no one asked any

3 = yes, it was policy to do so and some people asked questions

EQUIPT = the total number of types of equipment to which the media centers within the district had access, either from the district office or at the building level

1 = 4 to 5	6 = 14 to 15
2 = 6 to 7	7 = 16 to 17
3 = 8 to 9	8 = 18 to 19
4 = 10 to 11	9 = 20 to 21
5 = 12 to 13	

EXPENDS = A/B/C

A = total expenditures by the district for library media centers in 1980/81.

- | | |
|--------------------------|----------------------------|
| 1 = \$140 to \$4,999 | 6 = \$60,000 to \$74,999 |
| 2 = \$5,000 to \$14,999 | 7 = \$75,000 to \$124,999 |
| 3 = \$15,000 to \$29,999 | 8 = \$125,000 to \$199,999 |
| 4 = \$30,000 to \$44,999 | 9 = \$200,000 to \$309,000 |
| 5 = \$45,000 to \$59,999 | |

B = the percentage of column A which went for books, magazines, newspapers, binding, rebinding, audiovisual materials, and rental of films.

- | | |
|---------------|----------------|
| 1 = 1 to 9% | 6 = 50 to 59% |
| 2 = 10 to 19% | 7 = 60 to 69% |
| 3 = 20 to 29% | 8 = 70 to 79% |
| 4 = 30 to 39% | 9 = 80 to 100% |
| 5 = 40 to 49% | |

C = the total school library media center expenditures per pupil.

- | | |
|------------------|--------------------|
| 0 = up to \$9 | 5 = \$50 to \$59 |
| 1 = \$10 to \$19 | 6 = \$60 to \$69 |
| 2 = \$20 to \$29 | 7 = \$70 to \$84 |
| 3 = \$30 to \$39 | 8 = \$85 to \$104 |
| 4 = \$40 to \$49 | 9 = \$105 to \$235 |

NOTE: there are 10 more school districts in Appendix 3 than are included in the calculations in Appendix 1.
